

The dark streamlined windows have remained the same for exactly 60 years. There is no need to read the name: even from a distance, a Sanlorenzo yacht is immediately recognizable, at first glance. But then there is all the rest. Once on board, you can breathe in the atmosphere, enjoying the seamless layout, grasping through all your senses the painstaking attention to detail. It is the sophisticated craftsmanship of a very high-tech object, an apparent contradiction that somehow manages to coexist in a Sanlorenzo yacht. Nothing happens by chance: if Massimo Perotti, combining managerial ability, vision and a magic touch, has made all this possible today, it is thanks to the history of Sanlorenzo, rooted in the shipbuilding tradition of Limite sull'Arno where the firm was founded in 1958, and in the progress generated in the 1970s by the owner at the time. Those boats so coveted by yachtsmen for their comfort, reliability and tailor-made quality have evolved, since 2005, to become contemporary while keeping faith with their background of excellence. And they will continue to be contemporary, as happens with truly timeless objects.

YACHT

To create yachts that are reliable and durable, what counts is the material, and above all skillful minds and hands to shape it. The craftsmen make the difference, representing the human capital that Sanlorenzo has gathered at the production sites in Massa, Viareggio, and at Ameglia, inside the nature reserve of Montemarcello.

The four ranges of Sanlorenzo yachts in composite material (SL, SD, SX and SP) come to life here, in these model facilities organized with the most modern and eco-responsible production systems, thanks to the work of artisans who pass down their skills from father to son, and apply them to every single boat.

The primary material for hulls, decks and superstructures is a composite, a mixture of fiberglass or carbon fiber with special resins. While the hull and deck are made with fiberglass, the superstructures feature a composite based on carbon fiber, lighter and stronger, capable of granting greater stability to the boat on the water, for maximum on-board comfort.

The structure of each vacht comes from a mould made with the most advanced materials and technologies, to ensure a perfect balance between aesthetics and durability in time. But at the heart of the production of a Sanlorenzo vacht there are two techniques of workmanship: lamination, used for all the hulls, namely the application by hand of the composite material in the mould, with maniacal care, layer after layer, and infusion, a dry process which prior to the addition of resin makes the fibers compact with a vacuum method; applied for the superstructure and the deck, this process considerably improves performance.

Men and their skills represent the added value of a Sanlorenzo yacht: from the unique excellence of the staff, to the dedication with which the craftsmen approach the work on the interiors, finished with the same unique tailor-made quality found in high fashion. A perfect synthesis of skill, experience and passion.

SL FLEET

Streamlined, elegant and well-balanced at the same time: this is the SL fleet, the planing yachts by Sanlorenzo, which in 1985 marked the beginning of the production in plain fiberglass at the shipyard. Boats for owners who choose performance as a seagoing philosophy, fending the waves with complete stability and safety, with total quality of navigation that combines performance and comfort. The interiors of the SL yachts are made to measure by Sanlorenzo artisans with an accent on design and excellent finishing. The range includes six models (SL78, SL86, SL90A, SL96A, SL106A, SL120A) with lengths from 24 to 37 meters. Every yacht, even the smallest, offers various interior layout possibilities and can be completely personalized in keeping with the tastes and passions of its owner.

An ample lounge area at the bow in the shade of an awning, and a flying bridge larger than what you would expect to find on a 24-meter yacht: this is the outer image of the SL78. The interiors, completely personalized like all Sanlorenzo boats, have a contemporary, essential character in this model, based on tones of cream, beige and gray, which return in the finishes of the floors, walls and ceilings of all the spaces. The special custom solutions include the staircase leading from the living area to the upper deck: each step is enclosed by two panes of glass, and seem to float in the space. The cabins, all with private bathrooms, large windows and games of mirrors amplify the natural lighting. But light is (also and above all) a leitmotif of the design: in the SL78 the bulwark, recessed in the saloon area, considerably increases the brightness. With the result of blurring the boundaries between inside and outside.

SL 78/679

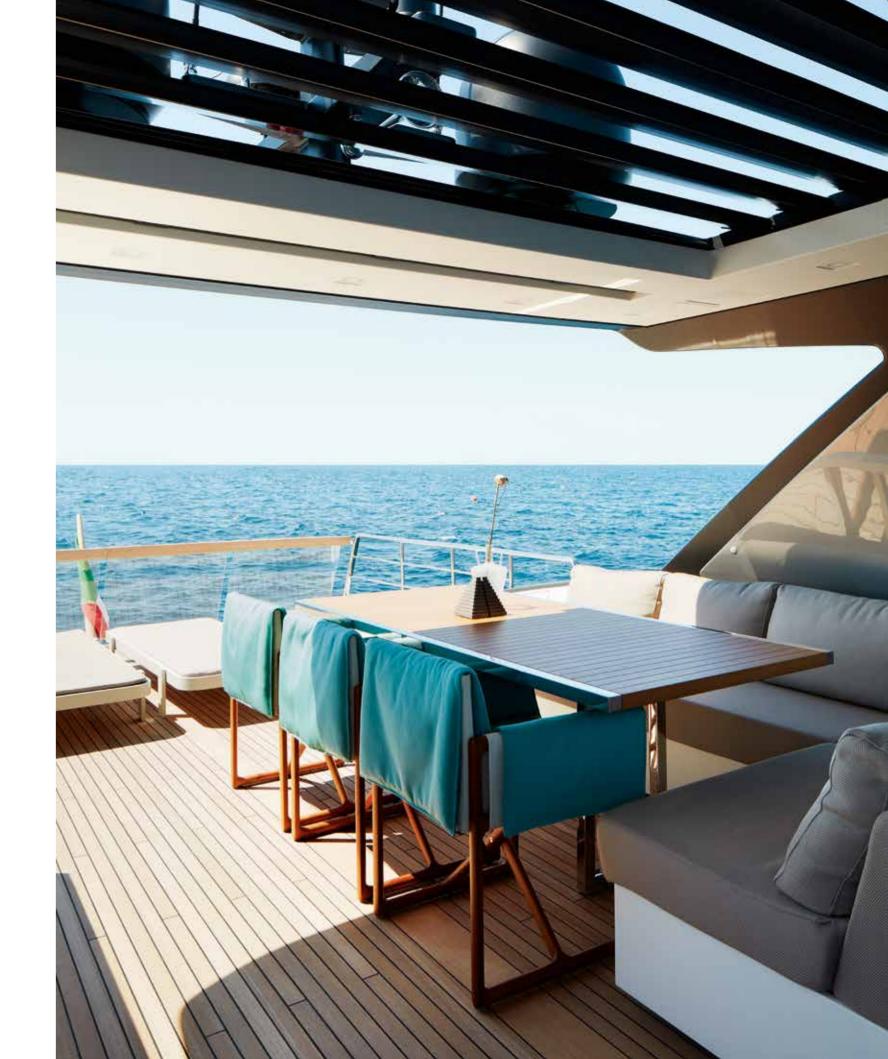

One look at the exteriors of this yacht conveys an idea of how the SL78 can offer owners everything they need for remarkable comfort in close contact with the sea. On the flying bridge, at the stern, a shaded dining area is flanked by a spacious sunbathing area; the bow on the main deck is outfitted with cushions for carefree basking in the breeze. The sense of assured comfort continues inside, where the dominant tone is the same cream color used for the outdoor furnishings. The lacquered walls and ceiling form a contrast with the furnishings in an eclectic, refined composition featuring contemporary design pieces like the sofa in antique rose velvet, and a dining table made with recycled wooden boards. The living area is divided from the galley by a mirror panel with brass inserts, shifting into the mood of the cabins: the same reflecting finish (this time backpainted in teal green) segues to the paneling of the bed in capitonné leather. All rigorously custom designed, down to the smallest details.
